

GREENBUILDING

Siemens supports the GreenBuilding Program

Energy Efficiency in buildings:

- Program led by the European Commission
- Buildings account for 40% of the final energy demand
- "Green" buildings are economically viable
- Improves heating and cooling of buildings
- Savings improve energy supply, reliability and reduce costs

Siemens supports the GreenBuilding Program: For a "green" and competitive Europe

What is GreenBuilding?

GreenBuilding is a European Commission (EC) program to enhance the energy efficiency in non-residential buildings. According to its Green Paper, the building sector accounts for more than 40% of the final energy demand in Europe. At the same time, the improved efficiency in heating and cooling of buildings constitutes one of the largest potentials for energy savings. Such savings also improves the energy supply reliability and the EU's competitiveness, while raising the quality of environment for those in the buildings.

The GreenBuilding Program is a voluntary program established in 2005. Its objective is to enhance the realization of cost-effective energy efficiency potential in buildings. This is achieved through generating public awareness for the initiative and public recognition for companies that show actual commitment to adopt energy efficient measures in non-residential buildings.

Interested? More information is available on:
<http://www.eu-greenbuilding.org>

Benefits for the GreenBuilding Partner

- Maintain or improve comfort levels, Infrastructure, indoor air quality and the service quality of the systems concerned
- Realize technically and economically feasible energy savings
- Receive public recognition (PR, Internet, EU Committee etc.)
- GreenBuilding plaque indicating that the building has high energy efficiency.

What can Siemens do?

As an "Endorser" of GreenBuilding, Siemens actively supports you with service offerings to enable you to obtain the GreenBuilding Certificate.

With proven solutions such as Energy Saving Contracts or Energy Optimization Services, you can use your energy savings to optimize the performance of your buildings.

Energy & Environmental Solutions

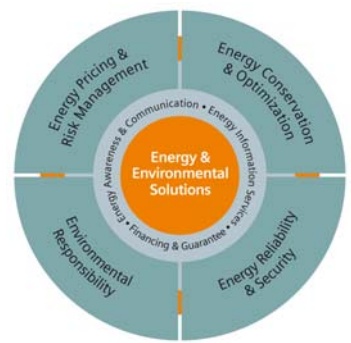

Siemens offers comprehensive energy and environmental solutions to manage your energy and environmental needs throughout the building's life cycle. It merges professional energy and environmental planning, consulting and commodity procurement with years of expertise in implementation and measurement of energy savings, facility improvement measures and infrastructure modernization. The result is an experienced partner to support you in adopting energy-efficient measures in your building.

A proven solution: Performance Based Solutions

You can use your energy savings to optimize the performance of your buildings. How does it work? By using energy and operational cost savings to pay for your investment.

We help you manage your buildings' energy costs, improve reliability and enhance performance while having a positive impact on the environment
